Fanshawe College - Student Feedback Survey

The Student Feedback Survey (SFS) is an important tool that provides opportunity for continuous improvement in teaching and learning. SFS results offer valuable insight into your teaching practices. Positive changes in teaching practices can lead to improvement in student learning and engagement.

The survey does not require students to enter a response for every statement. As a result, the number of responses for individual statements may vary.

As you read the students' comments watch for useful suggestions, constructive feedback, or recurring themes. Focus your improvement efforts on areas of teaching that students find important.

Please keep the response rate in mind when interpreting the SFS results. If only a small proportion of students in your course completed the survey, the feedback might not represent the viewpoint of an entire class.

Please note: If a survey form is completed for a course that is team taught by multiple instructors a report will generate if 4 or more students complete the survey, regardless of whether or not the individual response threshold was met (Threshold = 4 or more responses).

Please comment on how your instructor Mohammad Noorchenarboo helped your learning in this course or suggest possible changes that would improve your learning. Inappropriate comments will not be reported.

Comments
Professor Noorchenarboo is excellent! One of the best professors in this program. He demonstrates deep knowledge of his material and care for the students to understand it. His explanations are clear, and his pace and presentation manner make it easy to follow. Very professional and accessible.
One of the best professors I've ever had.
This class was a fantastic example of how to best approach a single-semester class. The instructor is passionate about the topic, brings a wealth of knowledge, and is happy to adjust and tailor the content to the students. The course covered industry-standard techniques, primary research driving topics, and encouraged us to truly understand the inner workings of machine learning and artificial intelligence from a scientific point of view. This course was written in a way to truly approach its material and content with a specific point of view, and successfully knew where to insert itself and cut out to efficiently teach content without overlapping too much with previously taught material. The instructors teaching style is incredibly engaging, and is full of opportunities for discussion and examples to solidify the understanding of truly graduate level topics. This instructor should be strongly considered to guide and inspire other special topics courses in this program, as well as the mainline courses as he is obviously able to have, demonstrate, and pass along intricate knowledge of AI/ML.
Found it less engaging but I think its because of the content of the course. He is very hardworking as he teaches for straight 3 hrs. Also, is helpful in solving everyone's doubt.
Fantastic prof. An asset to program. Cares very much about content and very knowledgeable!
