Fanshawe College - Student Feedback Survey

The Student Feedback Survey (SFS) is an important tool that provides opportunity for continuous improvement in teaching and learning. SFS results offer valuable insight into your teaching practices. Positive changes in teaching practices can lead to improvement in student learning and engagement.

The survey does not require students to enter a response for every statement. As a result, the number of responses for individual statements may vary.

As you read the students' comments watch for useful suggestions, constructive feedback, or recurring themes. Focus your improvement efforts on areas of teaching that students find important.

Please keep the response rate in mind when interpreting the SFS results. If only a small proportion of students in your course completed the survey, the feedback might not represent the viewpoint of an entire class.

Please note: If a survey form is completed for a course that is team taught by multiple instructors a report will generate if 4 or more students complete the survey, regardless of whether or not the individual response threshold was met (Threshold = 4 or more responses).

2	Provides results of tests/assignments promptly.	4.76
3	Provides helpful comments and feedback.	4.76

Written Response

Please comment on how your instructor Mohammad Noorchenarboo helped your learning in this course or suggest possible changes that would improve your learning. Inappropriate comments will not be reported.

Comments
He made me understand AI so well, with his teaching style and insisting we study the code intricately
Mohammad really makes sure students get the concepts before moving on. He encourages everyone to participate, making the class a two-way conversation. His focus on each student helps them feel motivated to join in the lessons. He tries to be approachable and treats students like real people, not just students.
He has deep expertise and extensive experience in the area he teaches. He's worked a lot with medical data, so he has strong experience with healthcare data specifically. He's great at figuring out exactly what students are asking and always gives clear, accurate answers.
I really enjoyed your teaching style this term. The quizzes encouraged me to stay consistent with studying the lecture materials, which was very helpful for my learning. I also appreciated the use of external references during lectures, as they helped me understand the concepts in a broader and more practical context. In particular, I found the layman-term examples at the bottom of the slides extremely useful for reinforcing complex ideas. I would love to see even more of these examples included in future lectures. Thank you for a great learning experience!
Mohammad was clear, supportive, and truly made sure we understood the material. He explained concepts well, was approachable, and fair with grading. Adding more hands-on practice would make the course even stronger.
He did an amazing job this term. In addition to his lecture presentations, he went above and beyond to create visualizations for us to better understand the topics we were studying. He referred to other leading scholars and personalities in the domain. Shared those resources with us as well. Overall, he made a significant impact on our learning in this program. He was able to pay individual + group-level attention to us, which is rare, and I appreciate him for doing that. He has also improved his communication skills a lot.
I had a great opportunity to learn from you over the last three semesters. Even though I was not able to review the lessons, whenever I attended your class I gained a clear understanding of the concepts. Among these three semesters, your teaching in the last semester was the best and especially easy to understand. The Transformer lesson you taught using a game method was so clear and engaging that I still remember it very well. :D Thank you very much for your excellent teaching and support.
Starting this course, I was very tense about how I would learn Artificial Intelligence and Machine Learning. However, the professor made things so easy and understandable that I wanted to delve deeper into every topic he taught. He taught us with full honesty and patience, every topic he taught he made us understand complex topics so easily with deep understanding and knowledge. Throughout my learning journey I have many teachers and they all were great but professor Mohammad is the G.O.A.T, he was so nice throughout our course and you know the best he never judged anyone even if he taught whole topic and someone would ask basic from starting he would again taught that no matter how many times.
The professor has a deep knowledge of Tensorflow and he was able to answer almost every question asked by any student in the class.
The assignments and projects helped build hands-on experience. Overall, the course was well-structured and valuable for developing applied deep learning skills.
Professor Mohammad has a strong passion for teaching and is also quite compassionate towards his students. While I think he can make some improvements on certain organizational aspects, like with providing updates on FOL and making assessment dates more clear, a lot of the time he is extremely flexible and very accommodating of his students. Engaging with him in class has been very productive and he always tries his best to reframe concepts in a way that is more easily received by students. Overall he was a very good professor and I felt like I gained a lot from my experiences with him in multiple courses throughout this program.
His way of teaching is excellent, I have never met with a professor who takes so seriously the doubts of students. He is very creative in terms of creating content for course and always engages entire class in the learning process. His classes are very interactive and interesting to attend.
Professor Mohammad is one of the best in our term.
I think he is a great professor. He explains the material in a simple way and repeats it until students understand.
I would include more questions in the quiz sessions and also administer quizzes before classes start, so that we can measure the students' evolution.
For the midterm and final quizzes, I suggest sticking to more general questions, focused on concepts and one or two cases.
His class notes were always very well put together. He has analogies in his slides and external sites to interactive tools that helped

Comments
understand complex concepts.
Professor Noorchenarboo is an excellent professor who cares a lot about his students. He has clearly taught and covered the concepts of the course, which has helped my learning tremendously. I particularly appreciated how he explained complex topics in an accessible way and was always willing to answer questions during and after class. The resources he provides are very organize and engaging, and he provides lots of helpful examples to visualize the concepts we study to make it more meaningful and easier to understand. He is very responsive and approachable as well for clarification and support. I am grateful for everything I learned in the class.
